Installation Guidance

I55 sensor kitchen mixer with pull-out spray

Bridgepoint SKU IDI55D0-12000 | Idral code I55D0-12000

Installation sequence

1. Have a qualified installer prepare the connections using the manufacturer drawing and the instructions supplied with the product. Purge the supply pipes before connection and provide suitable water filtration.

2. Align the tap with the deck opening, fit the gasket and secure the mounting kit. Connect hot and cold supplies to the marked inlets without twisting or stretching the flexible hoses. Keep service components accessible.

3. Install the supplied 6 V CRP2 battery in its designated compartment, following the model instructions. Protect the battery housing and connections from water.

4. Open the supplies and check for leaks. Set the mixed-water temperature and test sensor ON/OFF control by placing a hand 3-8 cm from the sensor. Confirm the 60-second continuous-flow safety stop.

5. Test the manual by-pass using the fitted cartridge control. Check the pull-out spray moves and returns freely.

Important

Product operating range: 1-8 bar; inlet water temperature 5-70 °C. The automatic hygiene flush occurs 24 hours after the last activation.
